List of Figures	xi
List of Programs	xiii
Preface	xv
Acknowledgements	xvii
1 Introduction	1
1.1 Background	1
1.2 Declarative Programming	2
1.3 Logic Programming Paradigm	3
1.4 Shortcomings of Prolog	8
1.5 Theoretical Foundations of Logic Programming	11
1.6 Program Verification	12
1.7 Prolog and Program Verification	13
1.8 Structure of the Book	14
1.9 Further Reading	16
1.10 References	17
2 Unification	18
2.1 Terms	18
2.2 Substitutions	20
2.3 Unifiers	24
2.4 * The Nondeterministic Robinson Algorithm	26
2.5 * Robinson's Algorithm	30
2.6 The Martelli–Montanari Algorithm	31
2.7 Properties of M _{gus}	37

2.8	Concluding Remarks	40
2.9	Bibliographic Remarks	41
2.10	Summary	41
2.11	References	42
3	Logic Programs: Procedural Interpretation	44
3.1	Queries and Programs	45
3.2	SLD-derivations	46
3.3	Comparison with other Programming Styles	51
3.4	Resultants	52
3.5	Properties of SLD-derivations	56
3.6	* SLD-derivations with Idempotent Mgus	60
3.7	Selection Rules	63
3.8	SLD-trees	67
3.9	Concluding Remarks	71
3.10	Bibliographic Remarks	72
3.11	Summary	73
3.12	References	73
4	Logic Programs: Declarative Interpretation	75
4.1	Algebras	76
4.2	Interpretations	77
4.3	Soundness of the SLD-resolution	79
4.4	Term Interpretations	81
4.5	Completeness of the SLD-resolution	84
4.6	* Least Term Models	87
4.7	Operators and their Fixpoints	89
4.8	* Least Term Models, continued	91
4.9	Herbrand Interpretations	92
4.10	Least Herbrand Models	95
4.11	* Comparison of the Least Term and the Least Herbrand Models	99
4.12	Concluding Remarks	100
4.13	Bibliographic Remarks	102
4.14	Summary	102
4.15	References	102
5	Programming in Pure Prolog	104
5.1	Introduction	105
5.2	The Empty Domain	114
5.3	Finite Domains	115
5.4	Numerals	118
5.5	Lists	123
5.6	Complex Domains	136
5.7	Binary Trees	138

5.8	Concluding Remarks	141
5.9	Bibliographic Remarks	144
5.10	Summary	144
5.11	References	144
6	Termination	146
6.1	Multiset Ordering	147
6.2	Terminating Programs	149
6.3	Applications	152
6.4	* Characterizing Terminating Programs	155
6.5	Left Terminating Programs	157
6.6	Applications	163
6.7	* Characterizing Left Terminating Programs	166
6.8	* An Improvement	169
6.9	Concluding Remarks	173
6.10	Bibliographic Remarks	174
6.11	Summary	175
6.12	References	176
7	The Occur-check Problem	178
7.1	Occur-check Free Programs	179
7.2	NSTO Lemma	180
7.3	Well-moded Queries and Programs	183
7.4	Occur-check Freedom via Well-modedness	189
7.5	Nicely Moded Programs	193
7.6	Occur-check Freedom via Nice Modedness	195
7.7	* Unfolding	198
7.8	* Insertion of the Occur-checks	200
7.9	Concluding Remarks	202
7.10	Bibliographic Remarks	203
7.11	Summary	204
7.12	References	204
8	Partial Correctness	207
8.1	Introduction	207
8.2	Well-asserted Queries and Programs	209
8.3	Applications	213
8.4	Computing Strongest Postconditions	219
8.5	Applications	224
8.6	Absence of Failures	226
8.7	Concluding Remarks	227
8.8	Bibliographic Remarks	229
8.9	Summary	230
8.10	References	230

9	Programming in Pure Prolog with Arithmetic	232
9.1	Operators	233
9.2	Arithmetic Comparison Relations	236
9.3	Complex Domains	238
9.4	Lists of Integers	240
9.5	Difference Lists	243
9.6	Binary Search Trees	246
9.7	Evaluation of Arithmetic Expressions	250
9.8	Concluding Remarks	253
9.9	Bibliographic Remarks	254
9.10	Summary	255
9.11	References	255
10	Verification of Pure Prolog Programs with Arithmetic	257
10.1	Syntax	257
10.2	Procedural Interpretation	258
10.3	Termination	259
10.4	Occur-check Freedom	263
10.5	Well-typed Queries and Programs	264
10.6	Absence of Run-time Errors	270
10.7	Partial Correctness	272
10.8	Concluding Remarks	278
10.9	Bibliographic Remarks	279
10.10	Summary	280
10.11	References	280
11	Towards Full Prolog	282
11.1	Cut	283
11.2	Sets	288
11.3	Collecting All Solutions	291
11.4	Meta-variables	293
11.5	Negation	295
11.6	Directed Graphs	298
11.7	Non-monotonic Reasoning	302
11.8	Term Inspection Facilities	305
11.9	Program Manipulation Facilities	309
11.10	Input/Output Facilities	312
11.11	Concluding Remarks	314
11.12	Bibliographic Remarks	316
11.13	Summary	317
11.14	References	318
	Index	322
